RecyclePro

   The RecyclePro Value Recycling/Waste Receptacles are designed for indoor/outdoor use and have an all weather finish. The outer bodies are protected from weather conditions by special high temperature baked on powder coat finishes which are applied to galvanized steel and/or solid aluminum bodies. All receptacles also have a rust and corrosion resistant aluminum base and are supplied with heavy gauge, seamless, hand-spun aluminum covers. The RecyclePro Recycling/Waste Receptacles are durable as well as handsome.

   RecyclePro Recycling/Waste Receptacles have covers and bodies that are silk screened with clear messages and logos that look professional and last indefinitely. We allow you to choose the message/logo you want for each opening of our recycling receptacles. For a minimal set-up fee, custom messages, corporate, & government branding can be easily created by our art department for inclusion on your units. Available in three different sizes, these smartly designed recycling receptacles are already a favorite of commercial facility managers and recycling coordinators across the country. Make RecyclePro Recycling Receptacles your preferred collection choice!
